ABOUT

I am a software engineer with 4 years of professional experience, mainly in front-end development using **React**.
I worked on various projects and dived into a lot of concepts of front-end development, from content-driven websites focused on accessibility and SEO to data-driven web apps with complex forms, data-rich charts and tables, reusable UI components and design systems. I have experience in **leading other developers**, reviewing their work and enforcing certain patterns, project-specific standards and **best practices**.

WORK EXPERIENCE

Full-stack Web Developer

November 2020 - January 2023

Calculate

Working full-time for more than two years on this project, I led a team of 3 to 4 front-end developers in the process of creating and maintaining features while setting design system standards for the design team to follow.

Projects:

Calculate: A financial tool for modern SaaS organizations that automatically generates reports on finances, growth metrics, cashflow forecasting, cash management, customer growth and churn, multi-source subscription management and more. Features complex editable tree tables with fixed columns, sticky headers and advanced styles, interactive data rich charts. Collects data from most known major accounting softwares. My biggest responsibility in this project is to create and maintain different libraries in a monorepo for tables, charts and reusable UI components.

Full-stack Web Developer

May 2020 - November 2020

Coformatique

Working as a full-stack web developer on varying projects in this warehouse company, using different sets of technologies, I gained experience in accessibility, pixel perfect UI, responsive design and SEO.

Projects:

BMW Foundation: Built this website from the ground up until it went live, it's an informative website of the foundation's mission, plans and events. The website features advanced accessibility features and multi-language routing.

What I worked on

Website (front-end)

Educational platform:

An educational platform where professors can upload and schedule lectures to different classes, automatically create and share Zoom meeting links after a lecture have been seen by all the students to discuss it, create assignments, quizzes and grade students. We built two mobile apps for Android and iOS, an admin dashboard where professors can manage lectures, send emails with grades to students' parents.

SELF-TAUGHT COURSES

Mastering React (by Mosh Hamedani)
Node.js - The Complete Guide to Build RESTful APIs (by Mosh Hamedani)
Vue - The Complete Guide (w/ Router, Vuex, Composition API) (by Maximilian Schwarzmüller)
CSS - The Complete Guide (by Maximilian Schwarzmüller)
Master C++ and OOP (Learncpp.com)
Introduction to Game Development Specialization (Coursera)

EDUCATION

Bachelor's Degree of Computer Science and Automatic Control
Faculty of Engineering - Tanta University
2014 - 2019

GRADUATION PROJECT

An Express-like C++ web application framework 🔄
A simple-to-use web development framework with an easy syntax inspired by Express.js that lets developers build full-fledged back-end multi-threaded api servers and connect it to the desired database in C++ that also supports middleware.
