ABOUT

I am a software engineer with strong analytical and problem-solving skills. I have 4 years of professional experience, mainly in front-end development using **React**. I worked on various projects and dived into a lot of concepts of front-end development, from content-driven websites focused on accessibility and SEO to data-driven web apps with complex forms, data-rich charts and tables, reusable UI components and design systems.

WORK EXPERIENCE

○

Front-end Web Developer

November 2020 - Current

Working full-time for more than two years on this project, I led a team of 3 to 4 front-end developers in the process of creating and maintaining features while setting design system standards for the design team to follow.

I have had experience in **leading other developers**, performing code reviews and enforcing certain patterns, project-specific standards and **best practices**.

Projects:

Calqulate: A financial tool for modern SaaS organizations that automatically generates reports on finances, growth metrics, cashflow forecasting, cash management, customer growth and churn, multi-source subscription management and more. Features complex editable tree tables with fixed columns, sticky headers and advanced styles, interactive data rich charts. Collects data from most known major accounting softwares. My biggest responsibility in this project is to create and maintain different libraries in a monorepo for tables, charts and reusable UI components.

Technologies used

React TypeScript Material UI Sass Styled components react-hook-form Zod D3 Hasura Stripe Payment Gateway GraphQL

Auth0 Turborepo Sentry Hasura AWS

What I worked on

Front-end Web App Back-end API Types SDK

Calqulate

○

Full-stack Web Developer

May 2020 - November 2020

Working as a full-stack web developer on varying projects in this warehouse company, using different sets of technologies, I gained experience in accessibility, pixel perfect UI, responsive design and SEO.

Projects:

BMW Foundation: I built this website from the ground up until it went live, it's an informative website of the BMW Foundation's mission, plans and events. The website features advanced accessibility features and multi-language routing.

Technologies used

React Gatsby TypeScript Material UI JSS Multi-language Routing Responsive Design I18Next Axios

What I worked on

Website (front-end)

Coformatique

Full-stack Web Developer

May 2019 - May 2020

Projects:

Netjeek: First project I've worked on that's went live, it's an eCommerce trans-shipping system designed to facilitate the purchase and delivery of goods to countries where customers can't place an order to international e-retailers directly.

Technologies used

React Javascript Material UI JSS Express.js Global State with React hooks Stripe Payment Gateway I18Next Axios JSON Web Token

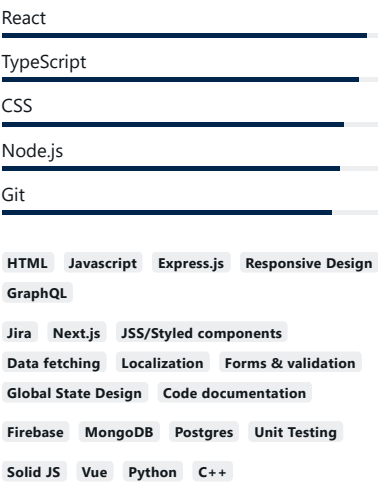

Google Maps JSDoc Jest Enzyme Python

What I worked on

eCommerce Website (front-end) System Analysis Mock API creation

Haya Solutions Inc.

SKILLS & TOOLS

LANGUAGES

English (Fluent)
Arabic (Native)

SELF-TAUGHT COURSES

Mastering React (by Mosh Hamedani)
Node.js - The Complete Guide to Build RESTful APIs (by Mosh Hamedani)
Vue - The Complete Guide (w/ Router, Vuex, Composition API) (by Maximilian Schwarzmüller)
CSS - The Complete Guide (by Maximilian Schwarzmüller)
Master C++ and OOP (Learncpp.com)
Introduction to Game Development Specialization (Coursera)

EDUCATION

Bachelor's Degree of Computer Science and Automatic Control
Faculty of Engineering - Tanta University
2014 - 2019

GRADUATION PROJECT

An Express-like C++ web application framework 🔄
A simple-to-use web development framework with an easy syntax inspired by Express.js that lets developers build full-fledged back-end multi-threaded api servers and connect it to the desired database in C++ that also supports middleware.

C++17 CGI Apache Multithreading Linux
