Dear Hiring Manager at **Digital Extremes**,

I am writing to express my interest in the **Software Engineer, Web (II - Sr)** position. I have over 5 years of experience in building elegant and performant user interfaces using various technologies such as **React**, **JavaScript**, **Python**, and **NodeJS**. I'm experienced in working collaboratively with others, performing code reviews and effective communication with clients.

Here's why I think I'm the perfect fit for this job

- I have a Meta Front-End Developer Specialization certification where I learned about design concepts and Figma. I'm also familiar with and use Photoshop.
- I have experience with mobile-first design, optimizing website for phones and achieving high Lighthouse scores by following best practices
- I'm familiar with agile environments, CI/CD, and daily scrum meetings.
- I've worked with back-end frameworks like Express, NodeJS, and Python Django.
- I'm familiar with writing maintainable code and documenting it using meaningful comments and JSDoc.
- During my time at Calqulate, I participated in peer code reviews for code quality and enforcing best practices.
- I have experience with CMS technologies like Wordpress and Contentful.

I'm an avid gamer with a passion for software and game development. I taught myself Unity, and I've been playing Warframe since 2016! I'm very interested in Digital Extremes and I would love to work for a game development company since it combines two of my greatest passions.

Thank you for considering my application. I would love to discuss this opportunity further with you and answer any questions you may have.

Sincerely,
Ahmed Habeila
